Features Key:

Become a Tarnished Dragon Clan Member and Begin Your Adventure

Tarnished dragons spend time in the Underworld testing the souls of those who raise them. When asked of their origins, they often refer to themselves as "child prodigies," "relic hunters," or "guardians of the children of the Elden Ring" or "masters of the Elden Ring's secrets."

The artwork and atmosphere of the Underworld give it the feel of the Old School RPG of classic video games. You can enjoy the latest updates from Bandai Namco Games.

Bandai Namco Games, This is Tarnished. Now is the time to rise and fly away from the Underworld. Rise and live in Elden Land, the Land Between. You are a dragon warrior destined to protect your clan and its Legendary Child. A prophesied hero, that will rise above the harsh deeds of mortals, and follow a legendary path from the Land Between into your destiny.

So it's been about a month now, but THIS CHANNEL IS ALL BUT INACTIVE and I have finally had the time to reactivate it.

The reason WHY is that I'm quitting LWJGL, and from what I understand or maybe know, LWJGL can be called a nightmare for Java. Something like GLFW for C++ or a nightmare for the user. Sure it has a huge community of extension, but the way you start with the library is very problematic, and the documentation of the API is very bad. You will need to manage a large number of configurations and memory management is a hellish curse.

However, OpenGL is very powerful and I feel that having a bad experience with it would be a great opportunity for me to learn something new, and not about graphics or computer games, but about computer graphics.

So what is LWJGL? It's like GLFW, if you think that you're going to need to write a lot of low-level C++ code to render some OpenGL thing, you shouldn't use LWJGL.

But if you just use the API and focus on getting a simple to use Java Renderer going, and you just need to render some simple things on the screen, and what you need from the moment is the OpenGL API and how to use a 3D library for Java, you can easily use LWJGL, and you will be happy.

I think that many Java developers get confused because they are not only writing Java code but also writing "shadow" C code under the hood, and they feel as if they are doing something wrong. They don't understand that Java is an environment and

a language for compiling your code.

You have no choice, and you also shouldn't try to code with only Java, as Java is designed to offer, it does everything you need for a
